

INTRODUCING THE NEW 'IN LINE' DISHWASHERS FROM NEFF FOR MAXIMUM FLEXIBILITY IN KITCHEN DESIGN

At eye level; in a bank of appliances; in an island unit; side-by-side, in column or beneath the worktop. Every single one of these options is now totally feasible for installing a dishwasher, thanks to the imminent arrival of the new 'In Line' range of compact dishwashers from Neff.

TWO NEW MODELS

There are two 60cm wide compact models in the new range, both finished in stylish stainless steel to coordinate with other appliances in the Neff collection. Models S65M63N0GB and S66M63N0GB hold six and eight place settings respectively, with a choice of two heights: 45cm for the S65M63N0GB and 60cm for the S66M63N0GB.

Compact in size, both electronic models are packed full of special features to ensure that they deliver the best possible wash results for all types of crockery, from delicate glassware to heavy casseroles.

Eight place setting model S66M63N0GB incorporates two baskets, while 6 place setting model S65M63N0GB has one with two separate cup racks for greater flexibility. Despite its compact size, the 60cm model (S66M63N0GB) can accommodate a total of 96 items of crockery, enough to wash all the dishes for a family meal or a small dinner party.

Either one of these new models will fit in to any kitchen, however small in size or awkward in design. Their compact size means that they are as practical and flexible in kitchens where space is at a premium, as they are in kitchens offering plenty of room for manoeuvre. They are also perfect as an additional appliance in kitchens where there is already a full size dishwasher, as well as an economical option for smaller washes or for use in-between full loads.

TRIPLE 'A' RATED

Models S65M63N0GB and S66M63N0GB are both triple 'A' rated for washing, drying and energy efficiency and boast excellent eco credentials for economic use of money and resources. They are also very quiet in operation. An internal water heater with an integrated pumping system adds to the energy savings.

Two of special benefits of models are the inclusion of VarioSpeed® and a Hygiene option. VarioSpeed® is a unique programme option that guarantees time savings of up to 50%, while still providing the same sparkling end results and the Hygiene option is ideal for high temperature washing

IN LINE COLLECTION

As part of Neff's comprehensive 'In Line' collection, the two new dishwashers can be built in in tandem with other appliances from the company's extensive range.

They are designed to line up perfectly with these models, which include compact ovens, microwave and microwave combination ovens, steam and steam combination ovens, coffee centre and warming drawers. Models S65M63N0GB and S66M63N0GB can also be combined with Neff's award-winning SlideAway door oven.

Even if the kitchen already has a full size dishwasher, why not include a compact version near the coffee centre as well? It fits perfectly into an oven housing and makes it easier to wash up the coffee cups. If preferred, two of Neff's new compact dishwashers can be installed side-by-side or in-column. Ideal for people who need to wash their crockery separately, for religious reasons.

ERGONOMICAL DESIGN

For people with back problems, a compact dishwasher built in at eye level can make a real difference as it is designed to be very ergonomical in use.

By building it in at eye level, the consumer does not have to bend down for loading and un-loading and is able to accomplish these daily tasks without any effort at a practical level. In fact, the consumer can decide which height is most convenient for their own individual needs.

The S65M63N0GB (45cm high) will retail at €699 (excluding €5PRF) and the S66M63N0GB (60cm high) will retail at €799.
